

The Greening of Buildings - UPDATE 2007

FACT:

75 to 80% of contaminates that enter a building come through entryways.

Entrance mats are the first line of defense in protecting interior flooring in both wet and dry conditions. We believe that it is important to have some amount of matting at all entrances 365 days a year

A quality matting system stops contaminates at the door. Stopping these particulates not only reduces cleaning labor costs and reduces wear on floor surfaces but it also substantially reduces the need for cleaning chemicals that might be harmful to the building occupants and the environment.

Quality matting systems from PROFORM provide maximum performance for preventing soil and water from entering a building and therefore help to keep a building "Green".

Low quality mats do not hold up to heavy traffic, do not last as long, do not hold as much water or dirt, & diminish the appearance of your lobby.

There is no Greener way to clean than to stop the dirt at the door.

Mats are an integral component of a Green building.

Key benefits for using entrance mats:

- ✓ Removes wet & dry soils at the door minimizing the contaminants that enters the building
- ✓ Reduces the amount of cleaning and cleaning chemicals
- ✓ Reduces the wear and tear on interior surfaces
- ✓ Reduces the risk of trip and fall caused by water and dust on slippery floors
- ✓ Improves air quality by holding dust
- ✓ Improves the appearance of the entrance with custom handcrafted inlaid logos
