

Q. IS THERE A MAT SEASON?

A. Yes, January 1st through December 31st of every calendar year!

There is no cleaner and greener way to clean than to stop the dirt at the door. Rain or shine, winter or summer, matting is your 365 day cleaning machine.

Why entrance matting:

- ✓ Removes wet & dry soils at the door improving air quality by reducing dust and allergens
- ✓ Minimizes the time to clean allowing the re-allocation of labor
- ✓ Reduces the risk of trip & fall caused by water & dust on a slippery floor
- ✓ Enhances the appearance of your lobby with handcrafted personalized logos

Dust & dirt brought in from the outside reduces the life and increases the cost of maintaining flooring. This is particularly true in the dry season because sand and grit move around easier. Who would pour a pound of sand on their floor finish or into their carpet? No one, but It happens everyday in many facilities.

Entrance matting is a year around program that needs as much (if not more) attention in the dry season than it does in the winter. Floor finish & carpet are both severely damaged by the abrasive damage of sand and grit.

Rental matting can be chosen because laundry services make cleaning them easy. Unfortunately rental mats are often more dangerous than the problem they were designed to solve. Too many unsightly mats, with edging that easily curls when kicked, pose a real trip hazard. In addition their light face weight translate into minimal water, dirt, dust, & allergen retention.

The bottom line is that a quality matting program saves money, improves the life of interior flooring, improves air quality, and does it all without labor or cleaning chemical...now that's a lot of **Green**.
